
Software Requirements Specification

for

Models and Minis Webservice

Version 1.0 approved

Prepared by August Mayden, Benjamin Keahey, Victor Eaton

Mississippi State University

9/10/2026

1. Introduction

1.1 Purpose

This SRS is to produce the "Models and Minis" ecommerce website at release 1.0. The SRS is meant to cover all aspects of the website's development at its most basic level. The whole website covers all basic user classes and their functionally required capabilities.

1.2 Document Conventions

For the purposes of this document, all priorities for higher-level requirements are inherited by their respective detailed requirements.

1.3 Intended Audience and Reading

This document is intended for use by all manner of developers, project managers, marketing staff, users, testers, and documentation writers for the purpose of understanding the basic nature of the "Models and Minis" website. The following sections detail the higher-level details of the project, the specific characteristics of all proposed system features, nonfunctional requirements such as user experience and security, and any other non-compartmentalized requirements in that order.

For developers, project management, testers, and documentation writers the general flow of the documentation should be

- Overall Description
- System Features
- Nonfunctional requirements
- Other requirements

For marketing staff and users the general flow of documentation should be

- Overall Description
- Nonfunctional requirements
- Other requirements
- System Features

1.4 Product Scope

The "Models and Minis" website is the focused software package for the purposes of this document. It is an e-commerce web service intended for the buying and selling of hobby models and miniatures.

The benefits of this structure are the wider accessibility of products across target consumers by accessing via website rather than in-person store. Additionally, the lack of a physical store improves the cost of staff maintenance of the service by requiring minimal administrative oversight to ensure smooth operation.

The objective of this project is to create a software package which is fully capable of meeting and exceeding the necessary aspects of a fully operational and profitable e-commerce website with minimal overhead.

The goal is rapid deployment of the software for the purposes of fulfilling user necessities and allowing for quick and accessible means to buy and sell our target merchandise.

Title: Design-Pattern Guidelines: Study Guide

Authors: Samhita Tankala and Alita Kendrick

Date: February 9, 2024

2. Overall Description

2.1 Product Perspective

<Describe the context and origin of the product being specified in this SRS. For example, state whether this product is a follow-on member of a product family, a replacement for certain existing systems, or a new, self-contained product. If the SRS defines a component of a larger system, relate the requirements of the larger system to the functionality of this software and identify interfaces between the two. A simple diagram that shows the major components of the overall system, subsystem interconnections, and external interfaces can be helpful.>

2.2 Product Functions

- Allow users to purchase model kits, minis, hobby tool and supplies, etc. from the webstore
- Allow users to make an account in the webstore
- Allow users to add payment methods for purchases
- Allow admins to manage orders
- Allow users to view order history
- Allow users to search for specific items and products
- Allow sellers to add products to the webstore for sale

2.3 User Classes and Characteristics

<Identify the various user classes that you anticipate will use this product. User classes may be differentiated based on frequency of use, subset of product functions used, technical expertise, security or privilege levels, educational level, or experience. Describe the pertinent characteristics of each user class. Certain requirements may pertain only to certain user classes. Distinguish the most important user classes for this product from those who are less important to satisfy.>

2.4 Operating Environment

The product will largely operate from a web browser, such as Google Chrome, Firefox, Safari, etc. The database used will be mySQL running on a vps server.

2.5 Design and Implementation Constraints

<Describe any items or issues that will limit the options available to the developers. These might include: corporate or regulatory policies; hardware limitations (timing requirements, memory requirements); interfaces to other applications; specific technologies, tools, and databases to be used; parallel operations; language requirements; communications protocols; security considerations; design conventions or programming standards (for example, if the customer's organization will be responsible for maintaining the delivered software).>

3. System Features

3.1 User Account Creation

3.1.1 Description and Priority

Users will be able to attempt to register a new account with a unique email address and username of any user type or combination of user types (buyer, seller, admin). The new account registration must be accepted by a current admin user. This is of high priority, as it is necessary for the proper functioning of all following system features.

3.1.2 Stimulus/Response Sequences

1. User opens side tab
2. User clicks Register button
3. User is prompted to fill out username, email, and password as well as confirm password
4. User enters username, email, and password into text windows for respective fields
5. User clicks checkboxes indicating the type of account to create (buyer, seller, administrator or any of the above)
6. User clicks register account
7. User is notified that their account creation attempt has gone through and to wait for acceptance by administrators

Alt 1 (user enters incorrect information i.e. invalid email, blank fields, nonmatching passwords)

- 7A. User is prompted to try again
- 8A. Incorrect fields are highlighted in red

3.1.3 Functional Requirements

- REQ-1: Homepage is available
- Error Case: User is informed that the site is unavailable
- REQ-2: Side tab operational
- Error Case: User is indicated that the side tab is malfunctioning
- REQ-3: Register button operational
- Error Case: User is indicated that the register button is malfunctioning
- REQ-4: Registration page is available

Error Case: User is informed that registration page is unavailable
REQ-5: Registration entry fields are operational
Error Case: User is indicated that registration entry fields are malfunctioning
REQ-6: Registration button is operational
Error Case: User is prompted that their account creation attempt failed and to try again
REQ-7: Notification system is operational
REQ-8: User registration system is operational
REQ-9: Field entry checks are operational
REQ-10: Field highlighting is operational

3.2 User Account Login

3.2.1 Description and Priority

Users will be able to attempt to login to a preexisting, accepted account. This is of high priority, as it is necessary for the proper functioning of all following system features.

3.2.2 Stimulus/Response Sequences

1. User opens side tab
2. User clicks login button
4. User is prompted to enter email/username and password
5. User enters account information into provided text fields
6. User clicks login button
7. User is taken back to homepage logged into their account

Alt 1 (user does not enter correct account information):
7A. User is prompted to try again or register a new account

3.2.3 Functional Requirements

REQ-1: Homepage is available
Error Case: User is informed that the site is unavailable
REQ-2: Side tab operational
Error Case: User is indicated that the side tab is malfunctioning
REQ-3: Login button operational
Error Case: User is indicated that the login button is malfunctioning
REQ-4: Login page is available
Error Case: User is informed that login page is unavailable
REQ-5: Login entry fields are operational
Error Case: User is indicated that login entry fields are malfunctioning
REQ-6: Login button is operational
Error Case: User is prompted that their login attempt failed and to try again
REQ-7: Notification system is operational
REQ-8: User account system is operational
REQ-9: Field entry checks are operational

3.3 Admin Account Control

3.3.1 Description and Priority

Admin users will be able to access account information for currently existing accounts or attempted account creations. They will be able to ban, deny, or accept these accounts through a drop-down menu on each account page. This is of medium priority, as it is necessary for the administration of the site and ensuring a clean and safe web environment.

3.3.2 Stimulus/Response Sequences

1. Login with admin account
2. Open side tab
3. Click users button
4. User enters target account information into search such as UID, Username, or Email
5. User clicks the target current or attempted account page from search results
6. User clicks administrator options on target account page
7. User clicks ban/deny account option from drop downlist
8. User is prompted to confirm their decision
9. User clicks confirmation
10. User is informed that their ban/denial went through

Alt 1 (User has no target account information)

- 4A. User scrolls down list of recent account creations/attempted creations
- 5A. User clicks on target account of interest from list

Alt 2 (User wants to approve target account)

- 7A. User clicks approve account option from drop down list
- 10A. User is informed that their approval went through

3.3.3 Functional Requirements

- REQ-1: Capability of login with admin account
Error Case: user is prompted to retry
- REQ-2: Side tab operational
Error Case: user is indicated that side tab is malfunctioning
- REQ-3: Users button operational
Error Case: user is indicated that users button is malfunctioning
- REQ-4: Users page operational
Error Case: user is indicated that users page is inaccessible
- REQ-5: User accounts list is accessible
Error Case: user is indicated that accounts list is inaccessible
- REQ-6: User accounts are searchable
Error Case: user is prompted to retry search
- REQ-7: Individual account pages are accessible
Error Case: user is indicated that account page is inaccessible
- REQ-8: Administrator options operational
Error Case: user is indicated that administrator options are malfunctioning
- REQ-9: Ban/denial options operational
Error Case: user is prompted to retry ban/denial
- REQ-10: User prompting operational
Error Case: user is indicated that their action wasn't properly cataloged
- REQ-11: Prompt acceptance operational
Error Case: user is prompted to retry acceptance
- REQ-12: Account removal operational
Error Case: user is informed that their account removal did not go through
- REQ-13: Account acceptance operational
Error Case: user is informed that their account acceptance did not go through

3.4 Admin Listing Control

3.4.1 Description and Priority

Admin users will be able to access listing information for currently existing listings or attempted listings creations. They will be able to remove, deny, or accept these listings through a drop-down menu on each listing page. This is of medium priority, as it is necessary for the administration of the site and ensuring a clean and safe web environment.

3.4.2 Stimulus/Response Sequences

1. Login with admin account
2. Open side tab
3. Click listings button
4. User enters target listing information into search such as listing ID, title, or owner account information
5. User clicks the target current or attempted listing page from search results
6. User clicks administrator options on target listing page
7. User clicks remove/deny listing option from drop-down list
8. User is prompted to confirm their decision
9. User clicks confirmation
10. User is informed that their removal/denial went through

Alt 1 (User has no target listing information)

4A. User scrolls down list of recent listings/attempted listings

5A. User clicks on target listing of interest from list

Alt 2 (User wants to accept target listing)

7A. User clicks accept listing option from drop down list

10A. User is informed that their acceptance went through

3.4.3 Functional Requirements

REQ-1: Capability of login with admin account

Error Case: user is prompted to retry

REQ-2: Side tab operational

Error Case: user is indicated that side tab is malfunctioning

REQ-3: Listings button operational

Error Case: user is indicated that Listings button is malfunctioning

REQ-4: Listings page operational

Error Case: user is indicated that Listings page is inaccessible

REQ-5: Listings list is accessible

Error Case: user is indicated that listings list is inaccessible

REQ-6: Listings are searchable

Error Case: user is prompted to retry search

REQ-7: Individual listings pages are accessible

Error Case: user is indicated that listing page is inaccessible

REQ-8: Administrator options operational

Error Case: user is indicated that administrator options are malfunctioning

REQ-9: Removal/denial options operational

Error Case: user is prompted to retry removal/denial

REQ-10: User prompting operational

Error Case: user is indicated that their action wasn't properly cataloged

REQ-11: Prompt acceptance operational

Error Case: user is prompted to retry acceptance

REQ-12: listing removal operational

Error Case: user is informed that their listing removal did not go through
REQ-13: listing acceptance operational
Error Case: user is informed that their listing acceptance did not go through

3.5 Admin Listing Editing

3.5.1 Description and Priority

Admin users will be able to access listing information for currently existing listings or attempted listings creations. They will be able to edit the information for these listings through a drop-down menu on each listing page. This is of medium priority, as it is necessary for the administration of the site and ensuring a clean and safe web environment.

3.5.2 Stimulus/Response Sequences

1. Login with admin account
2. Open side tab
3. Click listings button
4. User enters target listing information into search such as listing ID, title, or owner account information
5. User clicks the target or attempted listing page from search results
6. User has access to all relevant listing information
7. User clicks administrator options on target listing page
8. User clicks edit listing option from drop downlist
9. Listing page changes from static view to text box entries filled with current listing information
10. User clicks field they want to edit
11. User makes changes in edited field
12. User clicks "save changes" button in the bottom right corner
13. User is prompted to confirm their changes
11. User is informed that their listing edits went through

Alt 1 (User has no target listing information)

4A. User scrolls down list of recent listings/attempted listings

5A. User clicks on target listing of interest from list

3.5.3 Functional Requirements

REQ-1: Capability of login with admin account
Error Case: user is prompted to retry
REQ-2: Side tab operational
Error Case: user is indicated that side tab is malfunctioning
REQ-3: Listings button operational
Error Case: user is indicated that Listings button is malfunctioning
REQ-4: Listings page operational
Error Case: user is indicated that Listings page is inaccessible
REQ-5: Listings list is accessible
Error Case: user is indicated that listings list is inaccessible
REQ-6: Listings are searchable
Error Case: user is prompted to retry search
REQ-7: Individual listings pages are accessible
Error Case: user is indicated that listing page is inaccessible
REQ-8: Administrator options operational
Error Case: user is indicated that administrator options are malfunctioning
REQ-9: Edit listing options operational

Error Case: user is prompted to retry selection
REQ-10: Listing edit page accessible
Error Case: user is indicated that listing edit page is inaccessible
REQ-11: Listing information edit windows accessible
Error Case: user is indicated that edit windows are malfunctioning
REQ-12: Save changes button is operational
Error Case: user is informed that their changes were not saved
REQ-13: User prompting operational
Error Case: user is indicated that their action wasn't properly cataloged
REQ-14: Prompt acceptance operational
Error Case: user is prompted to retry acceptance

3.6 Admin Account Log Access

3.6.1 Description and Priority

Admin users will be able to access account information for currently existing accounts or attempted account creations. This includes information about all a user's actions on the website with associated time stamps. This also includes information about users on a broader scale such as across the whole website.

3.6.2 Stimulus/Response Sequences

1. Login with admin account
2. Open side tab
3. Click users button
4. User enters target account information into search such as UID, Username, or Email
5. User clicks the target account page from search results
6. User is taken to target account page with general user information
7. User clicks "access activity log information" button at bottom of account page
8. User is provided with log of all relevant user activity including most recent page accessed, recent purchases, recent cart additions, and recent cart removals along with associated time stamps.

Alt 1 (User has no target account information)

- 4A. User scrolls down list of recent account creations/attempted creations
- 5A. User clicks on target account of interest from list

Alt 2 (User wants to view general site activity information)

- 4A. User clicks on "site overview" button in top left corner
- 5A. User is taken to overall user activity page with listings for active user count, active listing count, average site traffic, and current site traffic

3.6.3 Functional Requirements

REQ-1: Capability of login with admin account
Error Case: user is prompted to retry
REQ-2: Side tab operational
Error Case: user is indicated that side tab is malfunctioning
REQ-3: Users button operational
Error Case: user is indicated that users button is malfunctioning
REQ-4: Users page operational
Error Case: user is indicated that users page is inaccessible
REQ-5: User accounts list is accessible
Error Case: user is indicated that accounts list is inaccessible

REQ-6: User accounts are searchable
Error Case: user is prompted to retry search
REQ-7: Individual account pages are accessible
Error Case: user is indicated that account page is inaccessible
REQ-8: Activity log button is operational
Error Case: user is indicated that activity log button is malfunctioning
REQ-9: Activity log is accessible
Error Case: user is indicated that activity log is inaccessible
REQ-10: Site overview button is operational
Error Case: user is indicated that site overview button is malfunctioning
REQ-11: Site overview page is accessible
Error Case: user is indicated that site overview page is inaccessible
REQ-12: Site overview information is accessible
Error Case: user is indicated that site statistics are not available

3.7 Product Purchasing and Subscriptions

3.7.1 Description and Priority

The system shall allow buyers to purchase available listings and subscribe to listings that provide a subscription option. Buyers shall be able to review the listing and payment information before completing a transaction. This feature is of **High priority**, as purchasing products is a primary function of the e-commerce website.

3.7.2 Stimulus/Response Sequences

1. Buyer searches for or browses to a desired listing.
2. Buyer selects the desired listing.
3. The system displays the listing information and available purchase or subscription options.
4. Buyer selects the desired purchase or subscription option.
5. Buyer reviews the item, price, and order information.
6. Buyer selects a valid payment method.
7. Buyer confirms the purchase or subscription.
8. The system processes the transaction.
9. The system informs the buyer whether the transaction was successful.
10. The system records the transaction in the buyer's order history.

Alt 1 (Buyer does not have a valid payment method)

6A. The system informs the buyer that a valid payment method is required.

7A. Buyer provides or selects a valid payment method and continues the transaction.

Alt 2 (Listing is unavailable)

3A. The system informs the buyer that the listing is unavailable and prevents the transaction from being completed.

3.7.3 Functional Requirements

REQ-1: The system shall allow buyers to select an available listing.
Error Case: The system shall inform the buyer if the selected listing is unavailable.
REQ-2: The system shall display the current price and relevant listing information before purchase.
Error Case: The system shall inform the buyer if required listing information cannot be retrieved.
REQ-3: The system shall allow buyers to select an available purchase or subscription option.
Error Case: The system shall inform the buyer if the selected option is unavailable.
REQ-4: The system shall allow buyers to select a valid payment method.
Error Case: The system shall prompt the buyer to provide a valid payment method.
REQ-5: The system shall require the buyer to confirm a purchase or subscription before submitting the transaction.
Error Case: The transaction shall not be submitted if the buyer does not confirm it.
REQ-6: The system shall process the buyer's purchase or subscription request.
Error Case: The system shall inform the buyer if the transaction cannot be processed.
REQ-7: The system shall record successful purchases and subscriptions in the buyer's order history.
Error Case: The system shall inform the buyer if the transaction cannot be recorded.

3.8 Listing Comparison

3.8.1 Description and Priority

The system shall allow buyers to compare multiple listings from different sellers. Buyers shall be able to view relevant information about each selected listing in order to make an informed purchasing decision. This feature is of **Medium priority**.

3.8.2 Stimulus/Response Sequences

1. Buyer searches for a desired product.
2. The system displays relevant listings.
3. Buyer selects multiple listings for comparison.
4. The system displays the selected listings together.
5. Buyer reviews information such as price, seller, description, and other available listing information.
6. Buyer selects a listing to purchase.

Alt 1 (Listing becomes unavailable)

3A. The system informs the buyer that the listing is no longer available and removes it from the comparison.

3.8.3 Functional Requirements

REQ-1: The system shall allow buyers to select multiple listings for comparison.
Error Case: The system shall inform the buyer if a listing cannot be added to the comparison.
REQ-2: The system shall display the selected listings together on a comparison page.

Error Case: The system shall inform the buyer if comparison information cannot be retrieved.

REQ-3: The system shall display relevant information for each compared listing, including price and seller.

Error Case: The system shall indicate when information is unavailable.

REQ-4: The system shall allow buyers to remove listings from the comparison.

Error Case: The system shall prompt the buyer to retry if the listing cannot be removed.

REQ-5: The system shall allow buyers to select a listing from the comparison page.

Error Case: The system shall inform the buyer if the selected listing is unavailable.

3.9 Order History

3.9.1 Description and Priority

The system shall allow buyers to view their previous purchases and associated order information. Buyers shall be able to select individual orders to view additional information about the items purchased. This feature is of **Medium priority**.

3.9.2 Stimulus/Response Sequences

1. Buyer logs into their account.
2. Buyer navigates to their account page.
3. Buyer selects the order history option.
4. The system displays the buyer's previous orders.
5. Buyer selects an individual order.
6. The system displays information about the selected order, including purchased items, seller, price, and order status.

Alt 1 (Buyer has no previous orders)

4A. The system informs the buyer that no previous orders are available.

3.9.3 Functional Requirements

REQ-1: The system shall allow authenticated buyers to access their order history.

Error Case: The system shall inform the buyer if their order history cannot be accessed.

REQ-2: The system shall display the buyer's previous orders.

Error Case: The system shall inform the buyer if order information cannot be retrieved.

REQ-3: The system shall allow buyers to select an individual order.

Error Case: The system shall inform the buyer if the selected order cannot be accessed.

REQ-4: The system shall display relevant information for the selected order.

Error Case: The system shall indicate when specific order information is unavailable.

REQ-5: The system shall only allow buyers to access their own order history.

Error Case: The system shall deny unauthorized access to another user's order history.

3.10 Refund Requests

3.10.1 Description and Priority

The system shall allow buyers to request a refund for an eligible item contained within a previous purchase. Buyers shall be able to select a specific item, provide a reason for the refund, and submit the request for review. This feature is of **Medium priority**.

3.10.2 Stimulus/Response Sequences

1. Buyer logs into their account.
2. Buyer navigates to their order history.
3. Buyer selects an order containing the item they want refunded.
4. The system displays the items associated with the order.
5. Buyer selects the specific item they want to refund.
6. Buyer selects the refund request option.
7. The system displays the refund request form.
8. Buyer provides a reason for the refund.
9. Buyer submits the refund request.
10. The system records the refund request.
11. The system informs the buyer that the request has been submitted.
12. The seller or administrator reviews the refund request.
13. The system records the refund decision.
14. The system informs the buyer whether the refund request was approved or denied.

Alt 1 (Item is not eligible for a refund)

5A. The system informs the buyer that the selected item is not eligible for a refund.

Alt 2 (Refund request is denied)

14A. The system informs the buyer that the refund request was denied.

3.10.3 Functional Requirements

REQ-1: The system shall allow buyers to select an individual item from a previous order.

Error Case: The system shall inform the buyer if the selected item cannot be accessed.

REQ-2: The system shall determine whether the selected item is eligible for a refund.

Error Case: The system shall inform the buyer when the item is not eligible for a refund.

REQ-3: The system shall allow eligible buyers to initiate a refund request.

Error Case: The system shall prevent the request from being submitted if the item is ineligible.

REQ-4: The system shall allow buyers to provide a reason for requesting a refund.

Error Case: The system shall prompt the buyer to provide required refund information.

REQ-5: The system shall allow buyers to submit refund requests.

Error Case: The system shall inform the buyer if the refund request cannot be submitted.

REQ-6: The system shall record submitted refund requests.

Error Case: The system shall inform the buyer if the refund request cannot be recorded.

REQ-7: The system shall allow authorized sellers or administrators to review refund requests.

Error Case: Unauthorized users shall be denied access to refund requests.
REQ-8: The system shall record whether a refund request was approved or denied.
Error Case: The system shall inform the reviewer if the decision cannot be recorded.
REQ-9: The system shall inform the buyer of the outcome of their refund request.

4. Other Nonfunctional Requirements

4.1 Performance Requirements

*The website should load standard pages within 2 seconds under normal operating conditions.
Search results should also be displayed within 2 seconds after a search is submitted.
The website should process account listing and order operations without significant delay.
The website should support multiple users accessing the different pages simultaneously without causing significant degradation in performance.*

4.2 Safety Requirements

*The website should require users to confirm purchases before an order is submitted.
The website should require administrators to confirm potentially destructive actions, such as banning users or removing listings.
The website should prevent incomplete or invalid information from being submitted when required information is missing.
The website should provide an error message when an operation cannot be completed successfully.*

4.3 Security Requirements

*The website should require users to authenticate before accessing account-specific information.
Administrator functionality should only be accessible to authorized administrator accounts.
Users should only be permitted to modify their own account and listing information.
User passwords should be securely stored on the server.
Sensitive payment information should not be directly accessible to unauthorized users.
The website should maintain activity logs for relevant administrative and user actions.
Communication between the user's browser and the web server should use secure communication protocols.*

4.4 Software Quality Attributes

*The system should be usable by users without specialized technical knowledge.
The system should be reliable in preserving account, listing, and order information.
The website code should be maintainable through a modular design.
The website shall be compatible with modern web browsers including Chrome, Firefox, and Safari.
Functional requirements shall be independently testable.*

5. Other Requirements

5.1 Database Requirements

The system will use a MySQL database to store information necessary for the operation of the website. This information includes user accounts, product listings, orders, and relevant activity records.

Each user account will have a unique identifier. Each product listing should have a unique identifier. The database will maintain relationships between users, listings, and orders so that users can access their account and order information.

5.2 Internationalization Requirements

The initial release of the website will use English as its primary language. Prices will be displayed using United States currency (USD).

5.4 Payment Requirements

The system will support electronic payment for purchases made through the website. Payment processing will use a secure payment service. The website will encrypt and store users' full payment card information in the MySQL database.

5.5 Data Retention Requirements

The system will retain users' order history so that users can review previous purchases. Relevant administrative and user activity records will be retained for website administration and security purposes.

5.6 Future Expansion

The system should be designed to allow additional product categories, users, sellers, and website functionality to be added without requiring a complete redesign of the system.

Commented [AM1]: I'll add/remove these at the end if we need them or not

User Stories:

General:

Commented [AM2]: Need to add general user stories for login/account creation

1. As a User, I want to be able to attempt to create a new account

Precon:

- User has internet access
- User is on website homepage
- User has a valid email address

Sequence:

1. User opens side tab
2. User clicks Register button
3. User is prompted to fill out username, email, and password as well as confirm password
4. User enters username, email, and password into text windows for respective fields
5. User clicks checkboxes indicating the type of account to create (buyer, seller, administrator or any of the above)
6. User clicks register account
7. User is notified that their account creation attempt has gone through and to wait for acceptance by administrators

Alt 1 (user enters incorrect information i.e. invalid email, blank fields, nonmatching passwords)

- 7A. User is prompted to try again
- 8A. Incorrect fields are highlighted in red

2. As a User, I want to be able to login to my account

Precon:

- User has a preexisting account of any type that has been accepted by an administrator
- User is on website homepage
- User has their account login details

Sequence:

1. User opens side tab
2. User clicks login button
4. User is prompted to enter email/username and password
5. User enters account information into provided text fields
6. User clicks login button
7. User is taken back to homepage logged into their account

Alt 1 (user does not enter correct account information):

- 7A. User is prompted to try again or register a new account

Admin:

1. As an Admin, I want to be able to control who can get a new account and ban users who violate terms of service.

Precon:

- Admin has a valid account
- Users have attempted to create an account or already have an account
- Admin already has account information for target accounts

Sequence:

1. Login with admin account (US 2)

2. Open side tab
3. Click users button
4. User enters target account information into search such as UID, Username, or Email
5. User clicks the target current or attempted account page from search results
6. User clicks administrator options on target account page
7. User clicks ban/deny account option from drop downlist
8. User is prompted to confirm their decision
9. User clicks confirmation
10. User is informed that their ban/denial went through

Alt 1 (User has no target account information)

- 4A. User scrolls down list of recent account creations/attempted creations
- 5A. User clicks on target account of interest from list

Alt 2 (User wants to approve target account)

- 7A. User clicks approve account option from drop down list
- 10A. User is informed that their approval went through

2. As an Admin, I want to be able to control when a new listing is posted and remove listings that violate terms of service.

Precon:

- Admin has a valid account
- Users have attempted to create a listing or already have a listing
- Admin already has listing information for target listings

Sequence:

1. Login with admin account (US 2)
2. Open side tab

3. Click listings button
4. User enters target listing information into search such as listing ID, title, or owner account information
5. User clicks the target current or attempted listing page from search results
6. User clicks administrator options on target listing page
7. User clicks remove/deny listing option from drop-down list
8. User is prompted to confirm their decision
9. User clicks confirmation
10. User is informed that their removal/denial went through

Alt 1 (User has no target listing information)

- 4A. User scrolls down list of recent listings/attempted listings
